

Manual

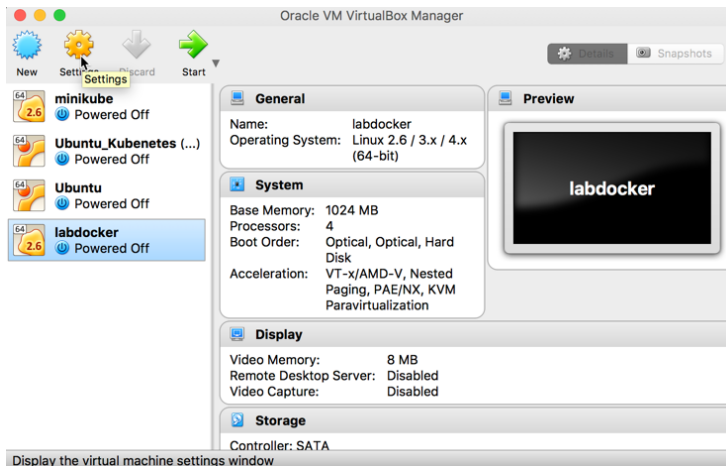

Create ShareFile for Docker Toolbox

Create ShareFile for Docker Toolbox

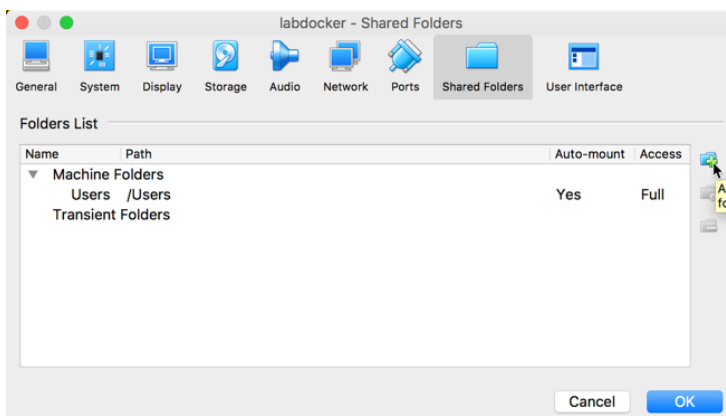

1. Create new folder to map share on your machine with name "Share_DockerToolbox"

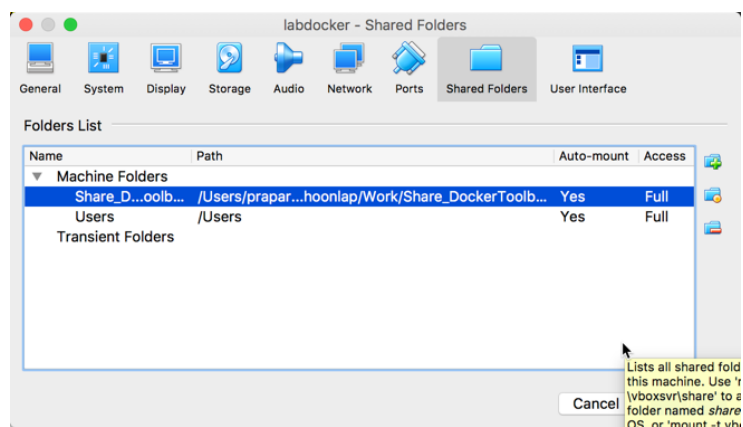

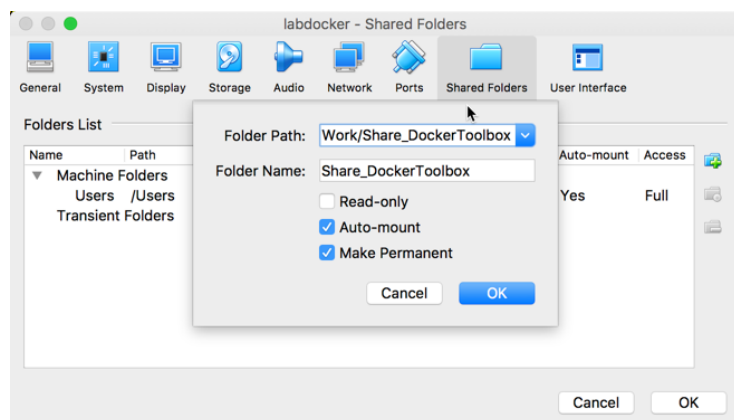

2. Open virtualbox and select "labdocker" with setting option

3. Select "Shared Folders" and click "Add folder"

4. Select folder "Share_DockerToolbox" and checked option "Auto-mount", "Make Permanent", Click "OK"

- Restart "labdocker" by command "sudo shutdown -r now"

[illegible]

6. After reboot finished, Relogin and check our share drive with command: "df -kh"

```
praparns-MacBook-Pro% docker-machine ssh labdocker

##

#####
NNN {NN NNNN NNN NNNN NNN N} ===- NNN

[DOCKERTOOLBOX]

Boot2Docker version 17.06.0-ce, build HEAD : 0672754 - Thu Jun 29 00:06:31 UTC 2017
Docker version 17.06.0-ce, build 02c1d87
docker@labdocker:~$ df -kh
Filesystem      Size      Used Available Use% Mounted on
tmpfs            896.2M    186.5M   709.7M   21% /
tmpfs            497.9M      0    497.9M    0% /dev/shm
/dev/sda1        17.9G     83.8M    16.8G    0% /mnt/sda1
cgroup           497.9M      0    497.9M    0% /sys/fs/cgroup
Users            464.7G    156.0G   308.6G   34% /Users
Share_DockerToolbox 464.7G    156.0G   308.6G   34% /Share_DockerToolbox
/dev/sda1        17.9G     83.8M    16.8G    0% /mnt/sda1/var/lib/docker/aufs
docker@labdocker:~$
```

7. Test copy file to share folder. This will appear on dockertoolbox also.
