# Manual

Create ShareFile for Docker Native (For Mac/For Windows)
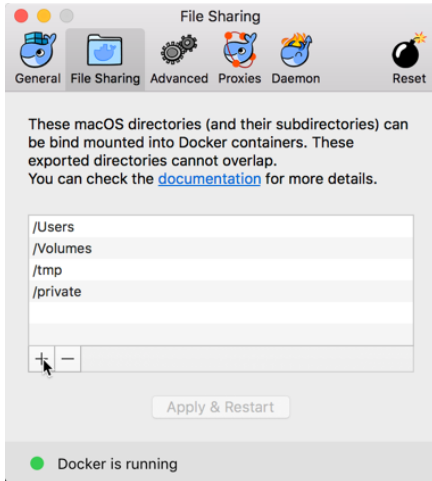

Create ShareFile for Docker Native

1. Create new folder to map share on your machine with name "Share_DockerNative"

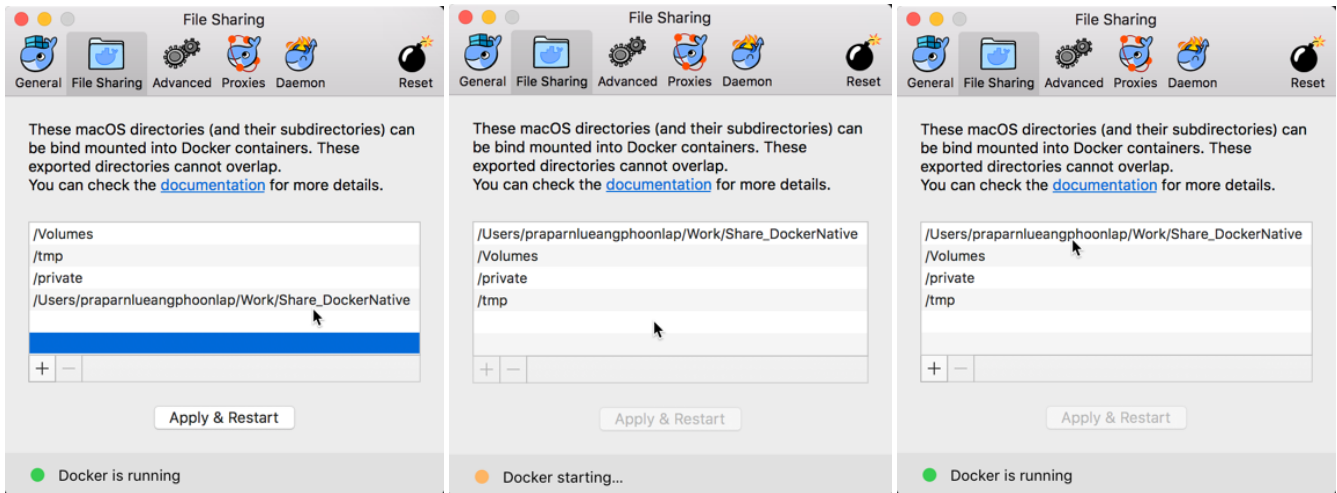

2. Right click on docker menu and select "Preferences"

3. Select "File Sharing" and click "+" //Note this folder cannot overlap with existing default share. You also can delete the default share for operate//

4. Select folder "Share_DockerToolbox" and click "Apply & Restart"

5. Use volume in container by –v option in container:

6. Optional: Docker for Native also can mount volume with ENV variable
